

TECHNOLOGY

PureCare utilizes the Host Dry Extraction system. The Host dry system affords a method of cleaning carpet that prolongs the life of the carpet. With the dry method it eliminates the water saturation and damage that can be caused to the carpet and the flooring underneath.

STEP 1- Dry Extract the entire area.

STEP 2 – Apply cleaner directly to high traffic areas and stain. Using the dual-action brushes on the Host machine the cleaner is disbursed over the entire surface area.

STEP 3- Dry Extract the entire area, removing loose dirt and debris that the pile-lifting brushes from the Host machine have brought to the surface. Also extracting the dry dirty cleaner, that has absorbed dirt and allergens, as well as, unwanted particles in the base of your carpet fibers.
